

APPLETON GATES

ASSEMBLY INSTRUCTIONS

Contents:

a) 4 hinges with 2 nuts and 2 washers on each

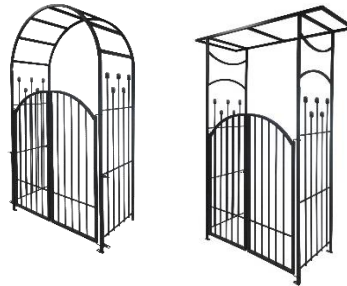

c) 1 right gate

b) 1 left gate

To attach the gates to an Appleton Arch

1. Attach a hinge to the bottom of the left side of the arch and the left gate - ensuring there is a nut and a washer on either side of the arch frame. Do not tighten at this stage. Only put on 'finger tight' to allow for adjustment. The threaded side goes through the arch frame from inside to outer, pointing up into the gate.

2. Attach a hinge to the bottom of the right side of the arch and the right gate – ensuring there is a nut and a washer on either side of the arch frame. Do not tight at this stage. Only put on 'finger tight' to allow for adjustment. The threaded side goes through the arch frame from inside to outer, pointing up into the gate.

3. Lift the left gate onto the bottom left hinge.

4. Attach the top left hinge in the same way as with the bottom hinges, but this time pointing down into the gate.

5. Lift the right gate onto the bottom right hinge.
6. Attach the top right hinge in the same way as the bottom hinges, but this time pointing down into the gate.
7. Adjust all hinges as necessary to straighten the gates and then tighten the hinges to ensure the gates are secure.
